

FXLoader Cloud Service Salesforce Integration

White Paper

Executive Overview

FXLoader Cloud Service integrates the most trusted currency exchange rate data with your Salesforce Application.

FX rates can be sourced from OANDA, Xignite, Reuters, XE and over 40 central banks, including the ability to mix and match. The service is configured according to your preferences for schedule, currencies and rounding.

U.K.

The service is fully automated – configure once and forget about it.

FXLoader resides on the secure and reliable Oracle Cloud Platform. Communication with rates sources and Salesforce is via secure web services.

Business Benefits

Salesforce needs currency exchange rates to convert foreign currency amounts to the base currency of your organization.

Salesforce provides a screen to enter these rates manually as part of the standard product. This can become time consuming, even if you only need a relatively small number of currencies. As with any manual process, mistakes occur which can have a major impact on your business:

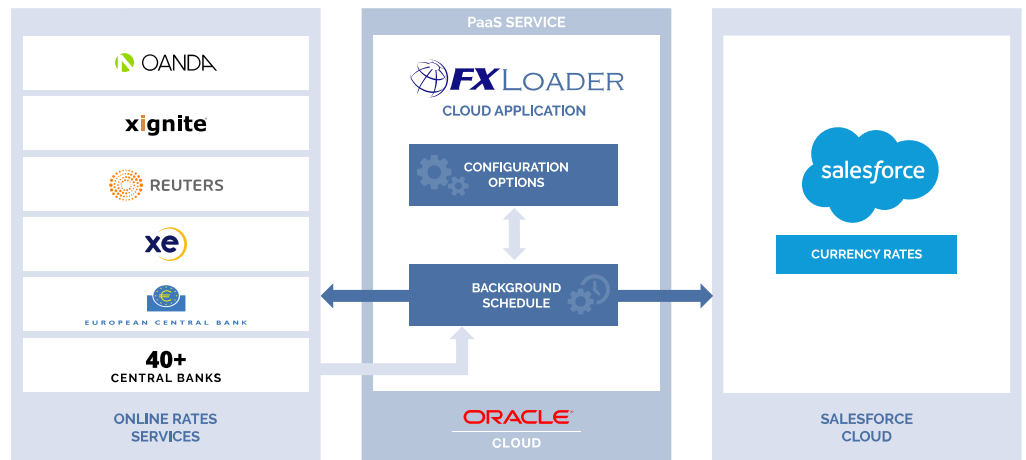

- If rates are not entered on a particular day, then reporting on foreign currency figures will use out of date rates.
- If a rate is entered incorrectly, the impact may not be noticed for weeks. For example, if a rate is entered the 'wrong way round' the impact on your reporting could be significant.

"Honestly, this was the easiest system installation we have."

Using FXLoader to automate the load of daily rates provides a number of benefits:

- No user intervention is required
- Rates are guaranteed to be accurate and up to date
- Robust failure handling makes this a highly reliable solution
- Easy to configure

Service Description

"FX Loader has been a tremendous addition to our Oracle ERP configuration. It runs seamlessly each night loading 500 + currency pairs"

"I think it is a brilliant product. Installation and implementation process are superb and very quick."

Source of FX Rates

FXLoader queries exchange rates from the leading rates service providers OANDA, Xignite, Reuters and XE.com plus a number of central banks.

- OANDA provides market rates between all trade-able currencies (approximately 170) and is used by the 'big four' accounting firms, tax authorities and financial institutions worldwide.
- Xignite provides a market data cloud including market rates for all trade-able currencies, plus central bank rates for over 15 countries.
- Reuters DSS provides market rates for all trade-able currencies.
- The European Central Bank provides official rates from the Euro to around 33 major currencies, via a free XML-based service.
- Other official sources include UK HMRC and Bank of England.

OANDA, Xignite, Reuters and XE are paid subscription services. All are high availability, authoritative services for up to date exchange rates. You can choose the service that best fits your needs or use any combination of services. Many of our customers use a market source supplemented by central bank rates for certain countries to meet local statutory requirements.

Schedule

You have complete control over the frequency of rates load. Most choose daily, but weekly, monthly, annually, based on your accounting periods or any specific dates are all available. You also have control over the time of day it runs.

Currency Management

Choose whether to update Basic Rates only, Advanced Rates only, or both Basic and Advanced, depending on your Salesforce setup. Advanced Currency Management in Salesforce gives you dated conversion rates.

Currencies

Configure which currencies you want to query from each source. You can also query using one currency code and load into Salesforce using a different code – useful when using an old code such as MXP for Mexico.

“This is a big win for our Finance team. Not only will this save time every month; but is a key process improvement for our SOX initiative”

Flexibility

FXLoader has a number of configuration parameters to provide flexibility in how you run it:

- Query one date from the source but load the data into a different date – for example load into the next day to ensure rates are available to users at the start of each day.
- Round rates using decimal places or significant figures, for all rates in a run or by currency, or even currency pair.
- Use the Bid or Ask rate for market rates, or use the mid-point.

Load into Salesforce

Rates are sent to Salesforce using the integration web services provided by the application.

“FXLoader has been a great tool that has saved us time and error-proofed our processes. Your team has been outstanding, the implementation was seamless, and I am overwhelmingly pleased with the results we are seeing!”

Failure Handling and Notifications

If the rates web service or Salesforce cannot be contacted for any reason, FXLoader will re-submit itself to try again later after a delay you specify. It will do this however many times you specify. You can specify up to five email addresses to be notified of the outcome, either for every run or only in the event of a failure.

Variance Alerts

Set up variance alerts to send an email when any FX rate varies from the previous date’s rate, or from a set of reference rates, by more than a chosen percentage. This percentage can be defined for the entire run, or for a particular currency or currency pair.

Technical Overview

FXLoader Cloud Service is hosted on an Oracle Platform as a Service (PaaS) instance, the core of which is an Oracle database. Oracle handle the availability and security, to the same enterprise standards as their cloud applications (SaaS).

Security

The communication with rates sources and Salesforce is via secure (HTTPS) web services.

The paid rates sources use an API key to validate access.

The web service to send rates to Salesforce depends upon the URL configured, plus a username and password (encrypted within FXLoader) that has access to load rates via the web service.

"We loved your product - it worked beautifully"

Purchase Information

FXLoader Cloud Service is available on a subscription basis, which includes full support during initial configuration and on-going proactive support for the process.

The OANDA and Xignite subscriptions can be purchased along with FXLoader. The European Central Bank and other official services provided directly via FXLoader do not require a subscription.

Further Information

FXLoader Cloud Service is available as a free 30-day trial. Please contact us for further information.
